Understanding Intelligent Design: Everything You Need To Know In Plain Language (ConversantLife.com®)

Synopsis

This compact guide lays out the basics of Intelligent Design, popularly known as ID. William Dembski, the dean of the intelligent-design movement, and Sean McDowell especially target readers whose understanding may have been confused by educational bias and one-sided arguments and attacks. Commonsense and no-nonsense, with pointed examples, the authors explain the central theories of ID, showing why the presence of information and meaningful complexity require the involvement of intelligence why ID adheres to the scientific method and is a valid field of scientific inquiry why scientific evidence increasingly conflicts with evolutionary theories show both evolutionary theory and ID have religious/philosophical underpinnings, and why this causes so much controversy how both systems of thought have radical implications for our culture "and what readers can do about it Clarifying crucial issues, this key resource gives nonspecialists a solid grasp of one of today's foundational religious-scientific-cultural concepts.

Customer Reviews

I highly recommend this book as a quick-read introduction to the intelligent design side of the origin of life debate. I was originally a bit skeptical of this book and only read it at the urging of a friend; so with low expectations I began reading, found it surprisingly illuminating, and finished it in two sittings. Despite several typos, I found it well-written, lucid, and engaging, and most importantly, to my relief it didn't seem to over-reach. I welcomed its brevity. As a shorter book its value is more to frame the argument than to definitively settle the debate. In reviewing many of the other reviews, I

was disappointed, not surprisingly, to find the response to this book so highly polarized: if one believes God created it all then one loves this book, but if one thinks that evolution explains the origin and development of life then one hates this book. Therefore, in the interest of full disclosure: I'm an MIT-educated engineer that enjoyed attending lectures by the fabulous and late Stephen Jay Gould (the father of punctuated evolution) while in college. I am very well read in science (I am a huge fan of Alan Guth, Brian Greene, and Alan Lightman) and typically prefer to avoid science-related books written by openly avowed Christians. I am also a Christian that believes in God our creator, but one that often disagrees with and occasionally is embarrassed by fellow Christians' understanding and analysis of science.
