## **Synopsis**

Series of four algebra workbooks This set of four problem-solving books follows the traditional one-year algebra course, covering the main algebraic principles. Book A begins the year with exercises in simplifying numerical expressions and moves on to one-variable equations. Book B follows with operations in polynomials, solving polynomial equations, and working with rational expressions. Book C involves proportions, graphing linear equations, plus inequalities and absolute value equations. Book D completes the course with roots and radicals, quadratic equations, and analysis of quadratic equations. Interest Level: 8-12

## **Customer Reviews**

This series easily contains the best algebra one worksheets I've ever come across. They cover absolutely every concept in the first year algebra textbooks (although not necessarily in the same order, which is why it's really important to get each of the 4 books). They provide wonderful practice for students struggling with algebra for several reasons. 1) They begin each section by grouping problems by solving technique, so that the student experiences the same method repetitively. The later pages in a section mix the problems so that the students must decide which technique to use. 2) The quantity of exercises alone is really helpful -- for students for whom repetition is the key, the number of easy to "intermediate" exercises provides enough practice to help the material "stick" with

the students.

Not for someone new to algebra, more for the advanced. It helps you to practice your algebra problems and gets you fine-tuned in math. This book does not give you instructions on how to work the problem, you must already know how to do algebra, answers in the back of the book. Pages and pages of worksheets.

Best practice workbook I've had in my 25 years of teaching. Great for homework. Great for guided practice. Gives plenty of problems for strong students to do while slowly doing the 1st problems for beginning g students
